SUMMARY

B.Tech graduate in **Electronics and Communication Engineering** with hands-on experience in **Business Intelligence and Data Analytics** utilizing **Python, SQL, Excel, Power BI, and Tableau**. Skilled in **business analysis, data cleaning, advanced analytics, and visualization** to extract actionable insights. Strong **problem-solving abilities** and experience in building **interactive BI dashboards** to support **stakeholders** and optimize **business performance**.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering Indian Institute of Information Technology, Design and Manufacturing, Jabalpur	Nov 2021 - Aug 2025
Higher Secondary Education Shantaben Manoharbhay Patel Junior College, Gondia	March 2020

PROJECTS

Ride Performance Risk Analysis [View Project] - Conducted EDA and Business Analysis on 150K+ Uber ride bookings using Python (Pandas, NumPy, Matplotlib, Seaborn) to identify demand patterns and operational inefficiencies. - Developed Advanced SQL queries to calculate KPIs such as cancellation rates, lost revenue, and peak demand hours for performance tracking and strategic decision-making. - Discovered driver cancellations (27K) were 2.5× higher than customer cancellations (11K), revealing 5M+ potential revenue loss. - Built an interactive Business Intelligence dashboard to visualize bookings, revenue, and demand trends, enabling data-driven decisions to optimize driver allocation and reduce losses.	Python, SQL, Power BI
Healthcare Capacity and Waitlist Analytics [View Project] - Developed an end-to-end Power BI dashboard to track and analyze 65,000+ patient waitlist records across inpatient and outpatient services. - Built two interactive pages to monitor KPIs, specialty-level performance, age profiles, and waiting time bands, delivering strategic insights for business analysis and operational improvement. - Revealed that 60% of the backlog originated from just five specialties, helping management prioritize resources and reduce delays. - Identified that patients aged 50+ experienced the longest wait times (18+ months), leading to initiatives to improve patient care and decrease backlog.	Excel, Power BI, Data Visualization
HR Analytics Dashboard [View Project] - Designed an end-to-end Tableau dashboard integrating Snowflake, AWS S3, and SQL to unify fragmented HR datasets into a single source of truth. - Analyzed employee demographics and found that 56% of employees hold a bachelor's degree, forming the largest workforce segment. - Identified early attrition risk (1–3 years tenure) and Production Technician I as the most common job role.	Tableau, SQL, AWS

TECHNICAL SKILLS

Languages: Python, SQL (Joins, CTEs, Window Functions)

Libraries: Pandas, NumPy, Matplotlib, Seaborn

Databases: Microsoft SQL Server, MySQL, Relational Database Design

Tools: Power BI, Tableau, Excel, AWS, Snowflake, GitHub, MS PowerPoint

Core Concepts: Data Modeling, Data Cleaning, Data Visualization, Cloud, Data Warehousing, ETL Processes, Data Analysis, Dashboard Design

CERTIFICATIONS

- Data Visualization with Power BI** – Microsoft
- Databases and SQL for Data Science with Python** – IBM
- Programming in Python** – Meta
